Camden Airport
Airport Environment Strategy
2005

> Foreword

I am pleased to present our 2005 Airport Environment Strategy, approved by the Minister for the Department of Transport & Regional Services in February 2005.

This Airport Environment Strategy has been prepared in accordance with the requirements of the Airports Act 1996 and the Airports (Environment Protection) Regulations 1997 and provides the framework for the environmental management of Camden Airport for the five-year period 2005 to 2010. It builds on the achievements of the previous Airport Environment Strategy and defines our ongoing commitment to best practice environmental management and sustainable development principles that will ensure continual improvement of the environment of the Airport. It has been written in conjunction with the Master Plan for Camden Airport, to ensure that the long-term use of the airport has appropriate supporting environmental strategies.

This Airport Environment Strategy has been prepared following public exhibition of a Preliminary Draft Airport Environment Strategy and consideration of resulting submissions received by Camden Airport Limited.

Camden Airport Limited is an Australian company owned by some of Australia's largest and most reputable companies including the Commonwealth Bank of Australia, Mirvac and Westscheme. However, Camden Airport Limited's owners are not just these large corporations, but include Australian individuals and families who are shareholders of Camden Airport Limited through superannuation funds.

It is the recognition of this diverse group of Airport stakeholders that has guided Camden Airport Limited in developing the environmental policies and actions in the Airport Environment Strategy. The airport's future economic growth is dependent on the business operating in harmony with the community in a healthy environment.

It remains Camden Airport Limited's intention to always act as a good neighbour, reinforcing our important custodial responsibility for this significant Sydney site. We will continue to respect the character of the place at Camden Airport and its significant location on the flood plain of the Nepean River. The land along the Nepean River is an area having ecological value and it will be managed to conserve these values.

The implementation of this Airport Environment Strategy means existing operations at the Airport undertake reasonable and practicable actions to manage environmental impacts as well as ensure that future developments at the Airport contribute to environmentally sustainable growth of Camden and Sydney.

Kim Ellis

Chief Executive Officer, Camden Airport Limited.
